PROFESSIONAL SUMMARY

Software engineer with 6 years of experience shipping a portfolio of SaaS and CRM products for 500+ daily business users. Expertise includes building REST APIs and real-time features in Node.js and TypeScript, shipping customer-facing React interfaces alongside designers, and integrating CMS and cloud platforms. Focused on measurable outcomes: faster products, reduced manual work, and scalable systems supporting 10M+ records and 10K+ concurrent users.

WORK EXPERIENCE

Software Developer - TotalAI Systems

Jan 2023 - Jul 2026

- Shipped 100+ production REST APIs (Node.js/Express, Laravel) powering SaaS, CRM and debt-collection products for 500+ daily users.
- Cut response times on high-traffic endpoints by ~20% by rewriting slow SQL and fixing indexing, keeping key screens fast as data grew past 10M+ records.
- Led 3 developers to deliver a reporting system over 10M+ records, and mentored 5 engineers on code quality and design patterns.
- Scaled real-time features (WebSockets, Redis, queues) to 10K+ users on Docker and AWS, so live alerts and updates stayed reliable under load.
- Integrated payment gateways, VoIP and third-party services across 15+ microservices via webhooks and OAuth, enabling new revenue-critical workflows.
- Built customer-facing React components with UX and visual designers, turning mockups into responsive, cross-browser HTML/Sass/CSS interfaces that shipped to production.
- Integrated an enterprise content management system with backend APIs so teams could update customer-facing content without engineering releases.
- Built CI/CD pipelines (Git/GitHub, Docker) and NGINX-fronted deployments on AWS, making releases repeatable and lowering deploy risk.
- Partnered with product managers and QA to ship features with reliability in mind, backed by monitoring and code reviews.
- Partnered with designers, product managers, and QA engineers to align technical implementation with business goals, demonstrating a love for working collaboratively on a team with varied strengths.
- Communicated technical requirements and project status in clear written and spoken English while operating from a reliable remote-work setup.

PHP Developer - Binplus Technology Pvt. Ltd.

Aug 2020 - Dec 2022

- Led 3 developers and delivered 20+ modules (Laravel, CodeIgniter), cutting report export time by 10%.
- Defined API contracts with React.js frontend teams, speeding up feature delivery by 25%.
- Built authentication, authorization and webhook integrations for 12+ client projects and presented the solutions directly to clients.
- Reviewed and merged work through Git pull requests in a collaborative team; migrated legacy JavaScript to TypeScript, reducing runtime errors; added application monitoring to catch performance bottlenecks early.
- Maintained end-to-end ownership of core SaaS features from initial architecture and database design to final deployment and monitoring on AWS.

EDUCATION

Shri Rawat Pura Sarkar Institute of Science & Technology

2016 - 2020

B.E., Computer Science & Engineering, 8.3/10

SKILLS & INTERESTS

Languages & Frameworks: Node.js, TypeScript, React, Express, Laravel, CodeIgniter, PHP, JavaScript, HTML, Sass, CSS, API Development, ES6, Angular, Vue, Python

Tools & Infrastructure: Docker, AWS, Redis, Git, GitHub, NGINX, Power BI, Superset, Metabase, NPM, Automated Testing

PROJECTS

Debt Collection SaaS (500+ agents)

- built compliance, payments and AI-VoIP workflows and the supporting web UI with designers, cutting processing time by 30%.

Real-Time Chat & Notifications (Node.js, Socket.io)

- live messaging and alerts that raised throughput by 45%.

CRM Workflow Automation Engine

- 15+ configurable workflows with access control, reducing manual setup time by 40%.

eCommerce Platforms (single and multi-vendor)

- secure payments and load-tested checkout paths, improving throughput by 50%.

Executive Analytics

- 12+ dashboards (Power BI, Superset, Metabase) giving leadership 95%-accurate trend tracking.
